

Applications

Iveda Solutions protects facilities and properties with online surveillance services tailored to specific industries:

Centralized Video Management – How It Works

"I have been able to save over 75% on monthly security costs since subscribing to Iveda Solutions Remote Monitoring Services. Access to my cameras is unprecedented! I can access archived footage from anywhere, at anytime and access exactly the time and date I wish."

Joe Farnsworth, President Farnsworth Realty & Management Company

"Partnering with Iveda Solutions to create a safer and more secure environment for our tenants makes sense because they assist property management companies like ours in deploying effective security while containing cost. Our goal is to eliminate crimes being committed at our properties and to give our tenants peace of mind. With enhanced security, we anticipate attracting more tenants."

Pamela Johns, Director of Asset Management - HELIX Asset Management, Phoenix AZ

"This is by far the best security system I've used for both of my stores, not only does it provide security, it also allows me to supervise my employees remotely."

Luis Brito, Owner - Mundo Cellular, Phoenix AZ

"We partner with Iveda Solutions in the Southwest Region because their intervention specialists help deter crimes committed at our yards, while they provide real-time video monitoring services over the internet."

Heath Gridley, IAAI Southwest Area Manager

"As promised, the reputation of Iveda precedes itself. Service received - beginning from proposed solution to install of hardware to monitoring of property - has been more than sufficient. We have saved approximately 56% a month, not including the cost of a live security operation which includes restroom rentals, theft damage, staff turnover, etc. Iveda Solutions has been an excellent addition to the security of Insurance Auto Auctions East Bay Branch. Customizing the monitoring schedule to fit the needs of our branch was simple, and it has identified activity that would have otherwise gone unmentioned or unnoticed. Iveda Solutions has done a great job thus far."

Henry Valenzuela, IAAI East Bay, Manager

Overview

Iveda Solutions' unique approach to providing online security surveillance services and human analytics through "cloud computing" has awarded Iveda Solutions the SAFETY Act Designation by the Department of Homeland Security as a Qualified Anti-Terrorism Technology provider.

Iveda Solutions, based in Mesa Arizona, is a wholly owned subsidiary of Iveda Corporation (OTCBB:IVDA).

SAFETY Act Designated

Iveda Solutions is an established and innovative company, delivering secure, open source and enterprise class managed video services by leveraging the power of cloud computing. The company's robust enterprise class video hosting architecture, utilizing a Tier-4 data center, allows scalability, flexibility, and centralized video management, access, and storage, without the burden of buying and maintaining software and equipment. Iveda Solutions delivers the true essence of video surveillance through cloud computing, like no other.

As the leader in IP video hosting, innovative services are enabled such as remote video access, real-time remote surveillance, and live mobile video streaming for a variety of applications in a multitude of industries.

Iveda Solutions' open-source technology is interoperable with any existing camera system and enables multiple, simultaneous access without degradation of video quality.

Utilizing video hosting technology, Iveda Solutions revolutionizes the functionality of security cameras, through a proactive real-time surveillance service rather than event or trigger based. The human intervention behind state-of-the-art technology makes the difference.

Iveda Solutions' customers experience is enhanced, through a more effective and reliable security solution that reduce cost and simplifies video access and storage.

This system is phenomenal. We use it all day long. Three of us who have administrative log in to the cameras each morning and we leave the site open all day. Whenever we can, we monitor the activities in the park. Two weeks ago we had a burglary alarm at the concession building. I was able to track the individuals as they ran from the scene. I was able to keep them in sight with the zoom lens of the camera and watch them as they went southbound on El Mirage Rd. for 2 blocks. I also observed as the officers took them into custody to ensure they had the right guys. From routine to criminal incidents, the camera system has already proven very effective for our needs here."

William C. Louis, Assistant Police Chief, El Mirage Police Department

The Iveda Solutions Advantage

Centralized Camera Management One Login, Not Multiple Logins to Various Cameras or Servers

Because Iveda Solutions utilizes an open platform, their customers are able to manage all their cameras within their network from various locations in one web-based dashboard. This allows remote, real-time viewing of all their cameras, as well as instant review of previously recorded video. In case of emergencies, camera views may be shared with law enforcement and other first responders to assess situations in real-time for a coordinated response. This is possible because there is no special software or hardware required. Any Internet-accessible device is all it takes. Customers can have full mobile access and management of their entire network of cameras using Windows-based cell phone or PDA, running on any cellular data network. Again, the idea is simultaneous video access without degradation of video quality.

Tier-4 Data Center Robust, Redundant, Capacity

Iveda Solutions utilizes a Tier-4 data center with a 99.99% uptime guarantee, redundant power, unlimited data processing and storage capacity, and an abundance of bandwidth. Iveda Solutions'

infrastructure design allows them to host massive numbers of cameras, like no other stand-alone system available in the market today. Because video is hosted at the data center, it allows customers to share video with multiple users, simultaneously.

Open Platform Any Camera Type or Brand

Iveda Solutions is not a camera company. It does not discriminate on the type or brand of security camera, whether network or analog. Thus, Iveda Solutions is able to salvage existing camera systems. This allows for true interoperability for private and public partnerships. Video management application can be run without requiring any proprietary software.

Video Surveillance Through Cloud Computing

"Cloud Computing" is not a new concept. It simply means that an application is running on a remote server and the user accesses it through the Internet, the same way online banking is accomplished. However, video surveillance in the cloud is new, and is pioneered by Iveda Solutions.

Using a tier-4 data center, Iveda Solutions has applied the cloud computing principle to video hosting and real-time surveillance services. By consolidating computing power into a single location at the server level, Iveda Solutions creates efficiencies

due to economies of scale, and offers more features and flexibility than ever before offered.

Implementing cloud computing is a better way to consolidate surveillance video, especially if it is coming from disparate geographic locations or facilities. Instead of running multiple DVRs and NVRs, the video is centrally hosted at the data center and the user accesses it using a Web browser. The users save on software, hardware, and maintenance. Remotely stored video eliminates the risk of video footage being destroyed or stolen. Access to multiple properties or locations anywhere around the world has never been easier.

Centralized Camera View

Products and Services

Managed Video Hosting

Managed Video as a Service (MVaaS) Centralizes Multi-Video Access.

Iveda Solutions utilizes a robust tier-4 data center that is capable of hosting live and recorded video from IP-enabled security cameras (network cameras or CCTV cameras digitally converted using a video server). This capability allows Iveda Solutions to offer real-time video surveillance, customer remote simultaneous access, and data archiving services.

Hosting and remote access services are ideal for customers managing multiple locations. With Iveda Solutions' remote access option, the user's video is transmitted to the Iveda Solutions data center where it can be distributed to an almost unlimited number of users simultaneously. Multiple users accessing the same video will have the same user experience, limited only by that user's Internet connection. The video data is stored securely for a period of time allowing for forensic access and retrieval of video for use as evidence in court.

Real-Time Video Surveillance

Live Human Intervention Secures Properties

Iveda Solutions economical real-time remote surveillance services offer end users highly reliable video surveillance solutions with a low cost of ownership. Humans are actually watching cameras at any time customers specify to catch the bad guys in the act and alert first responders with actionable intelligence. They don't wait for an alarm to be triggered, giving a proactive versus after-the-fact response. This real-time video surveillance allows for live visual verification, drastically reducing false alarms and escalating response priorities by police departments.

At the end of each live video surveillance shift, a Daily Surveillance Report (DSR) is generated and emailed to each customer. This consists of time-stamped snapshots of events along with detailed descriptions. The DSR not only provides proof to customers that their properties are being protected from criminal activities, but it keeps them abreast of the types of activities happening on their properties while they are away.

Express Surveillance System

Portable, Plug & Play Surveillance Unit

The Express Surveillance System (ESS) is a self-contained wireless surveillance unit, equipped with an integrated cellular router for an "always on" Internet connection. The camera is shipped pre-configured and ready for deployment on leading broadband cellular networks. All that is needed is a cellular data card and power.

The ESS is portable and remotely accessible, thus well suited for applications that require temporary high-quality video surveillance, such as special events, stake outs, and construction sites. Of course, this unit can also be used for permanent video surveillance applications. The unit is bundled with Managed Video Hosting Services to offer a complete plug-and-play system, ideal for remote surveillance, where typical ISP (Internet Service Provider) is not available and a local server or DVR is not practical. It's the perfect marriage between product and service, enabling fast and easy deployment.

In-Vehicle Mobile Video

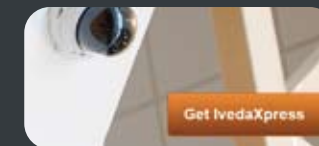

On-the-go surveillance

With the Iveda Solutions in-vehicle mobile video surveillance products and services, users are allowed real-time situational assessment of field activity. This untethered surveillance solution utilizes wide-area data services such as cellular, mesh wireless, and Wi-Fi. Centralized video management of your entire mobile fleet includes high quality real-time streaming video and instant review of footage remotely.

This service enhances existing mobile DVRs with live video and remote access.

Since your surveillance video is stored in our data center, there is no need to have a local recording solution onboard. All of your video is stored and can be transmitted in real time to any number of first responders.

Video footage is securely recorded and archived remotely at a data center for 24/7 access using a web browser.

IvedaXpress

Plug & Play Surveillance for Home or Office Use

IvedaXpress is a simple surveillance solution for home, office, or business on-the-go. It provides an inexpensive and easy to install enterprise level camera management solution. While existing DVR solutions require hours of messy network setup and upkeep for an experienced IT professional, IvedaXpress is virtually effortless to set up. No software to install, no recording device to set up, and no configuration required. It's a truly plug and play video surveillance solution.

"I enjoy the convenience of checking on my entire facility not only from my office, but also from home or any other location where I can access the Internet." here."

Charlie Sanders, Branch Manager, Insurance Auto Auction, Phoenix

Equipment Installation and System Integration

Full-Service Video Surveillance Company

Iveda Solutions designs, recommends, sells, and installs camera systems required by customers to fully take advantage of their IP network infrastructure. The company has the capability to do full deployment of new IP-based technologies or convert existing analog or CCTV cameras. Iveda Solutions is a turnkey integrator.

Video Access using any Internet-accessible device

The Leader in IP Video hosting and Real-Time Remote surveillance Service
